## The Consumer Price Index (CPI) slowed down to 3.1% in August 2020

The term inflation means a sustained increase in the general level of prices for goods and services. It is measured as an annual percentage increase, for example, August 2019 to August 2020. Take note that a falling rate of inflation means that prices are rising at a slower rate.

The **headline annual inflation** rate slowed down to 3.1% in August 2020 from 3.2% in July 2020. On average, prices increased by 0.2% month-on-month in August 2020.

The **food price** declined to 4.3% in August 2020 from 4.6% in July 2020.

**Transport inflation** increased to 0.2%% in August 2020 from 0.0% in July 2020.

**Public transport inflation** declined to 0.6% in August 2020 from 1.5% in July 2020 (Buses, trains and other forms of transport that are available to the public charge set fares and run on fixed routes.)

**Administrator's price** (school, telephone fees, electricity, trains, and petrol/paraffin) remained unchanged at 2.1% in August 2020 from 2.1% in July 2020.

Statistic South Africa divides household monthly expenditure into 10 decile. The table shows that decile 10 expenditure was higher than decile 1 expenditure, indicating a high level of inequality.

There is more than one inflation number. The inflation rate that is reported in mainstream media is the average inflation rate. Different groups, from the very poor to the wealthy, can experience different rates of inflation because they buy different things.

The very low group (Decile 1) experienced an inflation rate of 2.9%, lower than headline annualised inflation rate of 3.1%, while the very high expenditure group (Decile 10) had an inflation rate of 3.4%, which was higher when compared to the 3.1%. August 2020.
